Yonggyun Bae

Assistant Professor, Ph.D.

Department of Mechanical, Robotics and Energy Engineering, Dongguk University

Manhae Hall B103, Dongguk University, 30 Pil-dong 1 Gil, Jung-gu, Seoul, 04620, Republic of Korea

Tel.: +82-2-2260-3705 Email: ygbae@dgu.ac.kr

ORCID: 0000-0002-4394-3194 Google Scholar: https://scholar.google.com/citations?user=d5M6UBwAAAAJ

Research Interests

- Fundamental 3D numerical simulation
- Multiphysics reacting-flow phenomena (CFD)
- Solid oxide cell (SOFC/SOEC) stack design: bipolar plate, manifold, stacking
- AI-CFD integrated optimization (Bayesian optimization, PINN)
- Catalytic surface reaction kinetics

Education

Yonsei University Seoul, Korea

Doctor of Philosophy in Mechanical Engineering *February 2021*

Thesis: ***Development of reliable surface reaction mechanism of low-temperature dry reforming of methane on bi-metallic catalyst***

Thesis advisor: Prof. Jongsup Hong

Korea University Seoul, Korea

Master of Science in Mechanical Engineering *February 2016*

Thesis: ***Internal Pressure Fluctuations in Air-conditioner Indoor Unit with Cross-flow Fan***

Thesis advisor: Prof. Young J. Moon

Korea University Seoul, Korea

Bachelor of Science in Mechanical Engineering *February 2014*

Thesis: ***Revealing hydrodynamic structures of bathtub vortex***

Thesis advisor: Prof. Young J. Moon

Research Experiences

Department of Mechanical, Robotics and Energy Engineering, Dongguk University Seoul, Korea

Assistant Professor *September 2026 - present*

Department of Zero-carbon Fuel and Power Generation, KIMM Daejeon, Korea

Senior Researcher *February 2022 - August 2026*

- Development of bipolar plate and stack design of solid oxide fuel cell
- Optimal design of electrochemical reacting/heat and mass transfer

Department of Mechanical Engineering, Yonsei University Seoul, Korea

Post-doctoral Researcher *March 2021 - February 2022*

- Elucidating catalytic surface reaction mechanism
- Reactor optimization with integrated reacting-flow phenomena

Research Assistant *March 2017 - February 2021*

- Analyzing catalytic surface reaction kinetics
- Elucidating reacting transport coupling phenomena of CO2 reforming
- Developing newly designed separator and manifold of solid oxide fuel cell stacks

Teaching Assistant *September-December, 2018*
- Applied Thermodynamics (MEU3610-03)

Teaching Assistant *March-June, 2018*
- Air Conditioning and Environmental Engineering (MEU4610-01)

Teaching Assistant *September-December, 2017*
- Creative Mechanical Engineering Design II (MEU3300-04)

Teaching Assistant *March-June, 2017*
- Air Conditioning and Environmental Engineering (MEU4610-01)

High-Temperature Energy Materials Research Center, KIST Seoul, Korea

Research Assistant *December 2016 - May 2018*
- Analyzed potentio-dynamic response of solid oxide fuel cells under electrical load change
- Elucidated the heat and mass transport taking place in the fuel electrode of high-temperature solid oxide fuel cells
- Developed newly designed separator and manifold of solid oxide fuel cell stacks

Department of Mechanical Engineering, Korea University Seoul, Korea

Teaching Assistant *March-June, 2015*
- Basic Concepts of Heat Transfer (MECH311-02)

Honors and Awards

- Best Paper Award, The Korean Ceramic Society (2025)
- Best Paper Award, The Korean Hydrogen & New Energy Society (2025)
- Best Paper Award, The Korean Hydrogen & New Energy Society (2023)
- OnDream Future Technology Scholarship, Hyundai Motor Chung Mong-Koo Foundation (2019)
- Best Poster Award, IPHE and The Korean Hydrogen & New Energy Society (2019)
- Certificate of Distinction, Best Doctoral Paper, Graduate School of Yonsei University (2018)
- Best Paper Award, School of Mechanical Engineering, Yonsei University (2018)
- Best Poster Award, The Korean Hydrogen & New Energy Society (2018)
- Best Poster Award, The Korean Electrochemical Society (2017)
- Scholarship, Graduate School Student Association, Yonsei University (2017)
- 11th Jojeonghun Academy Award, KAIST (2015)
- Korea Techno Complex Scholarship (2014)
- Alumni Scholarship, Mechanical Engineering, Korea University (2013)
- Honors Student, Mechanical Engineering, Korea University (2013)
- Nogeon Scholarship (2012)
- Best Honors Student, Mechanical Engineering, Korea University (2012)
- Best Honors Student, Mechanical Engineering, Korea University (2011)
- Creative Challenger Scholarship (2011)
- Alumni Scholarship, Mechanical Engineering, Korea University (2010)
- Hongsan Scholarship (2010)

Technology Transfer

1. "Operation technology for renewable energy-based tri-generation system" Transferred to Chungbo Engineering Co., Ltd. **(2025).** *IP: Patent application KR 10-2025-0176135 (Heating and cooling system including heat pump).*
2. "Software module package for electrochemical energy systems" Transferred to UIT Co., Ltd. **(2024).** *IP: Membrane humidifier performance calculation program; Pressure swing adsorber performance calculation program; Solid oxide electrolysis stack performance calculation program; Polymer electrolyte membrane electrolysis stack performance calculation program.*
3. "Solid oxide fuel cell performance calculation program" Transferred to UIT Co., Ltd. **(2023).** *IP: Software registration C-2021-046617 (2021.11.11).*
4. "SOFC separator and stack design with improved thermal distribution" Transferred to PNP EnergyTech **(2019).** *IP: KR 10-2018-0036939; KR 10-2017486; KR 10-2018-0169046.*

Research Projects

As Principal Investigator

1. **"Development of a high-efficiency SOEC stack with simultaneous steam supply to both electrodes for reducing hydrogen production cost and utilizing high-purity oxygen"**

   International Joint R&D Program, Ministry of Trade, Industry and Energy (MOTIE)
   Principal Investigator (lead institution: KIMM) | July 2025 - August 2026
2. **"Optimal design of bipolar plate flow channels to suppress steam-electrode degradation in SOEC"**

   H2GATHER, National Research Foundation of Korea (NRF): Advancing the Durability of Solid Oxide Electrolysis Cells, A Global Collaborative Research Framework
   Principal Investigator of participating institution (KIMM) | April 2025 - August 2026
3. **"Start-up technology and AI-based health management for ammonia fuel conversion of SOFC systems"**

   ACE Program, KIMM (industry partner: HnPower Co., Ltd.)
   Principal Investigator | January 2026 - August 2026
4. **"Development of a numerical model for water electrolysis for comprehensive analysis of multiphysics phenomena"**

   Contract research, POSCO Holdings
   Principal Investigator | January 2023 - December 2023

As Participant: National Projects

1. "Development of planar cells, 20kW class stack modules and systems for large-scale, high-efficiency SOEC", **Funding: Ministry of Trade, Industry and Energy** (2021-2025)
2. "Development of horticultural energy model based on hydrogen fuel cell tri-generation system", **Funding: Rural Development Administration** (2021-2025)
3. "Development of manufacturing technology for improving high temperature durability and efficiency of metal bipolar for SOFC", **Funding: Ministry of Trade, Industry and Energy** (2020-2022)
4. "Chemisorption heat pump system using electrochemical compressor", **Funding: Ministry of Trade, Industry and Energy** (2019-2025)
5. "The development of high-efficiency modular SOFC system with extensible power generation", **Funding: Korea Evaluation Institute of Industrial Technology** (2019-2022)
6. "Reaction mechanism development of high performance/high selectivity/high durability heterogeneous bi-metallic catalyst for carbon-neutral dry reforming of methane", **Funding: National Research Foundation of Korea** (2019-2021)
7. "Long-term stable protonic ceramic fuel cells with large-scale nano-multi-layer structures implementing over 1 W/cm2 at 300-500 degC", **Funding: Korea Institute of Energy Technology Evaluation and Planning** (2017-2020)
8. "Development of core-technology for sustainable energy conversion systems facilitating oxy-fuel conversion and CO2 utilization", **Funding: National Research Foundation of Korea** (2018-2019)
9. "Smart design of SOFC repeating units for thermal-electrical load following by integrative multiphysics analysis", **Funding: Ministry of Science, ICT and Future Planning** (2017-2022)

As Participant: Industry Projects

1. "Technology development to reduce fine dust and black carbon emission for ships", **Funding: Korea Shipbuilding & Offshore Engineering Co., Ltd.** (2020-2021)

Professional Activities

- Expert Advisory Committee Member for Renewable Energy, Seoul Metropolitan Government (May 2025 - May 2027)
- Planning Advisory Committee Member, 2026 New R&D Projects in Hydrogen (Production), KETEP (October 2025)
- Planning Advisory Committee Member, 2025 Energy Technology Development Program, New Projects in Fuel Cells (Ammonia SOFC), KETEP (November 2024)

Teaching Interests

- Introduction to MATLAB and Python for Mechanical Engineers, Thermodynamics, Fluid Dynamics, Heat Transfer, Combustion and Fuel Cell, Energy Conversion Engineering, Renewable Energy
